

BIAC MEMBERS' ONLY WORKSHOP

21st September 2021 | 9.30am – 12.00pm

PHOSPHATE MITIGATION FOR PLANNING

Following a number of requests from BIAC Members, BIAC is pleased to offer this Members' only workshop on Phosphate Mitigation for planning.

Phosphate mitigation requirements are causing very long delays in planning applications for farms in developments where phosphate will be produced in areas where there is sensitive water and or wetlands.

During this Members' Only Workshop we will learn why Phosphate Mitigation is important from Terry Fuller, CEO of CIWEM (Chartered Institution of Water and Environmental Management) followed by a legal update on the "Dutch N case" from Julie Robinson of Roythornes Solicitors. Nigel Penlington of AgEngEnv Nigel Penlington Consultants will go through Nutrient Management and we will conclude with how you can mitigate phosphate in planning applications from Nicola Quick of Carter Jonas who recently featured in the Farmers Weekly on the subject.

PHOSPHATE MITIGATION FOR PLANNING
